BOLTEK

Lightning Alert Systems

QT-1 Quick Test Gun

☑ Verify operation of Boltek Lightning Alert Systems

☑ Quick and Easy Operation

☑ Able to activate dual-sensor systems

☑ Check both EFM-100 and ANT-2 sensors

☑ Check ERL-10 and Alert Equipment

☑ Generate Caution (Yellow) and Warn (Red)

☑ Perform Commissioning System Test

☑ Perform Annual System Test

For testing Boltek Lightning Alert Systems, including dual-sensor systems.

Dual-sensor Lightning Alert Systems are difficult to test since both sensors must be triggered simultaneously.   The QT-1 makes testing easy.

Usage:
Hold QT-1 approx. 50 cm (20 inches) below EFM-100 sensor.
Squeeze trigger very slowly to generate Lightning Caution (Yellow).
Squeeze faster to trigger Lightning Warning (Red).
Unplug/replug system to reset system to survey mode and repeat tests.

QT-1 Quick Test Gun Usage

ROOF SAFETY

Use of this product on a roof, or any other location at heights, should be restricted to personnel with roof safety training.

Appropriate safety equipment should be used, and safety practices followed.
